DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I in the reply filed on 9/10/07 is acknowledged. The traversal is on the ground(s) that the case was filed under 371 and the examiner hasn't considered the relationship of the groups of claims. This is not found persuasive because the product as claimed can be produced by a patentably distinct process such as incorporating the starch subsequent to the polymerization. Further, 371 relationship guidelines do not apply the claims relates as intermediate/final product.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

> The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-4, 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. The claim terminology "obtainable" renders the claims indefinite. This is improper product-by-process language. The language fails to limit the claim to a specific process but rather is open to any other process.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1-4 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Giesecke et al. US 6,489,382.

7. This patent shows the preparation of aqueous systems that can be based upon the claimed monomers, see column 6 lines 48-59. The claimed redox polymerization initiators are described at column 8 line 63 to column 9 line 35. The incorporation of the claimed starch is described at column 7 lines 8-14. The difference between the claimed invention and that claimed is that the art lacks an anticipatory example. The claims are prima facie obvious because each of the claimed limitations is disclosed and suggested to be used in combination with each other.
